SUBJECT: Continued Sampling of Colbert Monitoring Wells

During the interim period between the remedial investigation and the implementation of the remedial action, the ground water monitoring wells installed at Colbert should be sampled quarterly. I think the wells should be sampled for volatile organics, pH, conductivity, temperature, chloride, nitrate, and iron. Water levels should be taken with each sampling. The wells listed below should be included:

CD-1  
CD-3 U,M,L  
CD-2S  
CD-2D  
CD-4 U,L  
CD-5  
CD-6 U,L  
CS-13  
CS-14 U,L  
CD-7 L  
CD-8 M,L

I think Brad Ewy could do this sampling if we purchased a submersible pump for him to use. Eventually, we may want dedicated pumps in some of these wells if they will be used as part of the long-term monitoring of the remedial alternative.
